

CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

01 Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Continue the cinematic · Vault Signal

02 Find the parts.

Visual Studio note: A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;
```

```
class Program
```

```
{
```

```
    static void Main()
```

```
    {
```

```
        Console.WriteLine("What is your name?");
```

```
        string userName = Console.ReadLine();
```

```
        Console.WriteLine("Hello, " + userName);
```

```
    }
```

```
}
```

Library	Class	Main method	Prompt	Input + variable	Output
---------	-------	-------------	--------	------------------	--------

03 Explain each label in your own words.

Class

A container that groups related code.

The class is in the console and its what stores all the code, kinda like a house that stores everything.

Main method

The method where the console program begins.

The main method is where the program in the console begins, like the main door of a house.

Method / function

A named action. In C#, a function inside a class is called a method.

A method would be to ask a question, like what is your name?

Variable

A named place that remembers a value.

A variable would be the answer to the question, a variable to the function.

Console.WriteLine

Displays a line of text in the console.

it displays what is inside the quotations, like a question to be answered/

Console.ReadLine

Waits for typed input and returns that text.

it gives the answer to the question

04 Trace the data.

INPUT

The learner will type a question

VARIABLE

The variable, `string userName = Console.ReadLine();` stores the answer.

OUTPUT

the app will display the question and the answer when prompt

05 Plan your pathway version.

What will you replace or add after the tutorial app works?

I will replace the Console.WriteLine and add more of my story, I am sending supplies to help them fight against the aliens that are trying to kill the team.

Optional ways to go beyond the tutorial

- ☒ Another prompt ☐ A decision or conditional ☐ ASCII art in the console
☐ An image in README.md ☐ Another tested feature

06 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
